PROFESSIONAL SUMMARY

Results-driven Data Analyst and Cloud enthusiast with a PG-DBDA from C-DAC and a B.E. in Computer Engineering. Hands-on experience across the full data lifecycle — from collection and processing to visualization and predictive modeling. Skilled in AWS cloud services (EC2, Elastic Beanstalk, SNS), CI/CD pipeline implementation, and machine learning model development. Adept at translating complex datasets into actionable business insights using Python, Tableau, and Spark.

PROFESSIONAL EXPERIENCE

Data Analytics Intern

Jan 2025 – Apr 2025

IFAS Pvt. Ltd. • Pune, Maharashtra

- Architected end-to-end CI/CD pipelines (GitHub → CodePipeline → CodeBuild → CodeDeploy → EC2 → PM2) for a 3-tier app (React frontend, React admin, Node.js backend), eliminating all manual deployments.
- Provisioned Ubuntu EC2 instances — installed Node.js LTS v18, PM2, Nginx, and CodeDeploy agent; structured app directories at /var/www/frontend, /var/www/admin, and /var/www/backend.
- Configured Nginx reverse proxy (/ → port 3000, /admin → port 3001, /api → port 4000), serving clean URLs to users without exposing raw ports.
- Implemented multi-environment architecture (Dev / QA / PreProd / Prod) with dedicated EC2 instances, isolated pipelines, and a Git branching strategy (develop → qa → preprod → main).
- Managed process reliability with PM2 ecosystem files — enabled auto-startup on reboot and zero-downtime restarts on every CodeDeploy deployment.
- Enforced production security: HTTPS via Let's Encrypt (Certbot), UFW firewall rules, root login disabled, unused ports closed, secrets managed via .env files.
- Authored per-app buildspec.yml and appspec.yml configs; reduced CodeBuild install time by using npm --prefer-offline --no-audit flags.
- Diagnosed and resolved real-world deployment issues: Node v24 vs React incompatibility (rolled back to LTS v18), corrupt node_modules on EC2, and PM2 wrong-directory errors.

Software Developer Intern – Front End

Jan 2024 – Apr 2024

Candent Technologies Pvt. Ltd. • Pune, Maharashtra

- Developed responsive, user-facing web applications using React.js and Next.js, improving page load performance by optimising component rendering.
- Integrated MongoDB as the backend data store, designing schemas and building RESTful API endpoints for dynamic content delivery.
- Contributed to team sprint cycles, performing code reviews and resolving UI/UX bugs to maintain quality standards.
- Built reusable component libraries accelerating feature development across multiple internal projects.

TECHNICAL SKILLS

Cloud & DevOps	AWS EC2, Elastic Beanstalk, SNS, CodePipeline, CodeBuild, S3, IAM, Auto Scaling
Languages	Python, R, Java (OOP), SQL, JavaScript, HTML/CSS
Data & ML	Pandas, NumPy, Scikit-learn, XGBoost, SVM, Logistic Regression, PySpark, Apache Spark
Deep Learning	PyTorch, CNN, Emotion Recognition
Visualization	Tableau, Power BI, Streamlit, Matplotlib, Seaborn

Databases	MySQL, MongoDB
Web Frameworks	React.js, Next.js
Tools & Platforms	Git, GitHub, Linux, Kaggle, Jupyter Notebook

EDUCATION

PG-DBDA (Post Graduate Diploma in Big Data Analytics) *Feb 2025*

C-DAC – Advanced Computing Training School (ACTS), Pune

Score: 198 / 320 • Key Modules: Linux & Cloud Computing (29/40), Data Visualization (28/40), Big Data Technologies (26/40), Practical ML (26/40)

B.E. – Computer Engineering *2024*

MES College of Engineering – Savitribai Phule Pune University

70.3% — First Division

XII – Science *2020*

Modern College of Arts, Science & Commerce – Maharashtra State Board

65.23% — First Division

X – General *2018*

Alphonsa High School – Maharashtra State Board

81.4% — First Division

ACADEMIC PROJECTS

Lung Cancer Prediction using Predictive Modeling & Analysis *1 Month*

Tech: Python, PySpark, MySQL, XGBoost, SVM, Logistic Regression, Streamlit, Tableau

Built a scalable lung cancer prediction pipeline using Apache Spark for large-scale patient data processing, MySQL for storage, and ML algorithms for classification. Delivered real-time predictions via Streamlit and interactive dashboards via Tableau.

Repository: https://github.com/RutujC-137/Lung_Cancer_Prediction

Novel Ensembled Approach to Genomic Data (B.E. Final Year) *6 Months*

Tech: Machine Learning, Ensemble Methods, Python

Developed a novel ensemble ML model for early-stage Diabetes Mellitus prediction using genomic data. Combined multiple classifiers to boost diagnostic accuracy and support improved healthcare outcomes.

Repository: <https://github.com/RutujC-137/Novel-Ensembled-Approach-to-Genomic-Data-B.E-Project->

Facial Recognition using CNN (Emotion Detection) *4 Months*

Tech: PyTorch, Deep Learning, CNN, CK+48 Dataset

Implemented an emotion classification system using a custom PyTorch CNN trained on the CK+48 dataset (anger, contempt, surprise, etc.). Included full preprocessing pipeline — grayscale conversion, resizing, one-hot encoding — with 10-epoch training and a classification report evaluation.

Repository: <https://github.com/RutujC-137/Facial-Recognition>

CERTIFICATIONS & ACHIEVEMENTS

- ▶ Kaggle – Intro to Machine Learning (Certified)
- ▶ 1st Place – Integral Ad Science Codefest 2022 (Certificate of Achievement)
- ▶ 3rd Position – Robo Race (Line Following Robotics Workshop) organised by Roboclub MESCOE

PERSONAL INFORMATION

Languages: Marathi, Hindi, English | **Nationality:** Indian | **Hobbies:** Learning, Gaming, Reading, Football
